

# FROM FIELD TO LEDGER: VERIFIED METHANE DATA THAT STANDS UP TO SCRUTINY

A complete solution for your business. ✓

## Ground Truth Meets Digital Trust.

Sendero and Finboot combine boots-on-the-ground measurement with blockchain-enabled traceability to give oil & gas operators a trusted, auditable pathway from methane mitigation to monetized carbon credits.

### Meet Sendero

30+ years in oil & gas environmental compliance; services include GHG inventories, optical gas imaging, CCUS MRV, remediation, permitting, and full regulatory support.

### Meet Finboot

Trusted by global energy leaders like Repsol and Moeve; MARCO Track & Trace platform automates GHG tracking, carbon credit management, and compliance reporting.

See how verified data changes your bottom line.

## THE COST OF ESTIMATES? FINES, DELAYS, AND LOST MARKETS. ✓

Accurate emissions data is the foundation for compliance, global market access, and future revenue. If you rely on estimates, it elevates your risk of fines, reputational damage, and lost premiums in LNG and fuel markets.

## MEASURED. VERIFIED. MONETIZED. ✓

Field measurement + digital traceability to replace estimates with verified data and unlock monetization potential.

## BENEFITS ✓

1

### Reduce compliance risk

Satisfy OGMP 2.0, CBAM, and domestic reporting requirements with verifiable, field-audited data.

2

### Unlock market premiums

Position your gas or products for LNG and renewable fuel markets that demand proof of emissions performance.

3

### Save time & resources

Streamline data collection, verification, and reporting with an integrated field-to-digital workflow.
